**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com  
oblonpat@oblon.com  
jgardner@oblon.com

### Office Action Summary

**Application No.**

10/692,684

**Applicant(s)**

SUGA ET AL.

**Examiner**

KRISTIE L. BROOKS

**Art Unit**

1616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 29 January 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1, 12-17, 19-36, 38-46, 48-53 and 75-78 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 12-17, 19-36, 38-46, 48-53 and 75-78 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Status of Application***

1. New Examiner of Record. Kristie L. Brooks. Art Unit 1616.
  2. Claims 1,12-17, 19-36, 38-46, 48-53, and 75-78 are pending.
  3. Receipt and consideration of Applicants amendments/remarks filed on January 29, 2009 is acknowledged.
  4. After further consideration by the Examiner, the Final rejection mailed October 30, 2008 is hereby vacated and a new non-final office action is presented below.
  5. Rejections not reiterated from the previous Office Action are hereby withdrawn.
- The following rejections are either reiterated or newly applied. They constitute the complete set of rejections presently being applied to the instant application.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
7. Claims 1,12-17, 19-36, 38-46, 48-53, and 75-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama et al. (US 2002/0119164) in view of Kropf et al. (US 6,858,214).

Applicant claims a composition comprising superfine particles of a  $\beta$ -glucan derived from a water extract of a mushroom, wherein the superfine particles have an average particle diameter of 10 $\mu$ m or less, as determined in the form of a dispersion in water.

Applicant also claims a process for producing superfine particles comprising superfine pulverizing a  $\beta$ -glucan derived from a water extract of a mushroom.

**Determination of the scope and content of the prior art**  
**(MPEP 2141.01)**

Uchiyama et al. teach *Agaricus blazei* (a mushroom) in whole, particulate, or extracted form, can be used to treat forms of damage to the skin caused by toxins and chemicals (see the abstract and page 2 paragraph 25)). *Agaricus blazei* (a mushroom) in whole, particulate, or extracted form, when taken internally, also offers protection against various disorders including autoimmune disorders (see the abstract and page 2 paragraph 26). The identified compounds that have been extracted from *Agaricus blazei*

and that are of particular use in the invention include beta glucans (see page 3 paragraph 34 and claims 1 and 12).

The extraction may be done by immersing the mushroom in particulate form, in an aqueous solution or parts thereof with The extraction can also be done by immersing particulate *Agaricus blazei*, in plain hot water, preferably over 90°C (see page 2 paragraph 32 and page 3 paragraph 33). The extract may be freeze dried or concentrated using water or methanol/acetone solutions (see page 3 paragraph 33). The ratio of mushroom to water is preferably between 1:2 and 1:100 (see page 3 paragraph 33). The concentration of the extract is preferably between 0.05% and 50% v/v (see page 3 paragraph 44).

The extract can be used with other active or inactive ingredients and can be formulated as a liquid, capsule, pill, tablet, solution suspension or emulsion (see page 4 paragraphs 45 and 51). The extract can be formulated as a solution by dissolving the *Agaricus blazei* extract in water, oils, propylene glycol, etc. (see page 4 paragraphs 45 and 51). A wide variety of agents may be added to produce better dispersions or to accentuate cooling, soothing, or protective properties.

The extract is useful for treating skin disorders and internal diseases such as autoimmune diseases topical or internally (orally) (see page 3 paragraphs 37-43 and page 4 paragraphs 48-49). The extract may treat diabetes, lupus, certain types of cancer and can be used in the form of a food, drink or dietary product (see page 4 paragraph 50).

**Ascertainment of the difference between the prior art and the claims  
(MPEP 2141.02)**

Uchiyama et al. teach the *Agaricus blazei* extract (i.e. beta glucans) can be present in particulate form but do not teach the particle size of the extract. Uchiyama et al. also do not teach lecithin. These deficiencies are cured by the teachings of Kropf et al.

Kropf et al. disclose the use of nanoscalar water-soluble  $\beta$ -glucans. The  $\beta$ -glucans are contained in cosmetic and/or pharmaceutical preparation having particle diameters in the range of 10 to 300 nm (equivalent to 0.01 to 0.30  $\mu$ m) (see column 1, lines 43- 47). The composition can further contain adjuvants known in the cosmetic and/or pharmaceutical industry (see column 3, lines 19-34). Column 5, lines 51-52 teach that lecithin can be used in the composition as a hyperfating agent.

**Finding of prima facie obviousness  
Rational and Motivation (MPEP 2142-2143)**

One of ordinary skill in the art would have been motivated to formulate the *Agaricus blazei* extract (i.e. beta glucans) with the instant particle size (i.e. 10 $\mu$ m or less) because it is well known in the art to formulate beta glucans with the instant particle size for cosmetic or dermatological purposes, as suggested by Kropf et al. .

Thus, it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to formulate the *Agaricus blazei* extract (i.e. beta glucans)

with the instant particle size (i.e. 10 $\mu$ m or less) because it is an obvious particle size that beta glucans can be prepared when used for pharmaceutical or cosmetic purposes.

Although Uchiyama et al. do not teach lecithin can be used in the formulations, it is a common and known hyperfating agent (emulsifier) that can be used in formulations containing beta-glucan, as suggested by Kropf et al. Thus, it would have been obvious for one of ordinary skill in the art to incorporate lecithin into the formulation taught by Uchiyama et al., because it is a common additive to add to formulations depending on the desired form of the final product.

With respect to claims 39 and 44, although Uchiyama et al. do not specifically teach the step of filtering the extract, it would have been obvious to one of ordinary skill in the art to filter the extract, so as to remove any excess solution, impurities or additional materials that are not needed in the extract.

With respect to claims 16-17, it is also noted that the reference does not teach that the product can be made by the process instantly claimed, i.e. filtering, filtering and then concentrating and/or cooling. However, the patentability of a product does not depend on its method of production. If the product in the product-by-process claims is the same or obvious from a product in the prior art, the claim will be held unpatentable even if the prior product is made by a different process (See MPEP 2113).

Therefore, the invention as a whole would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the reference, especially in the absence of evidence to the contrary.

***Response to Arguments***

Applicant's arguments with respect to claims 1,12-17, 19-36, 38-46, 48-53, and 75-78 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to KRISTIE L. BROOKS whose telephone number is (571)272-9072. The examiner can normally be reached on M-F 8:30am-6:00pm Est..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann R. Richter can be reached on (571) 272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
